

REST Service using python Flask API – running on AWS windows server

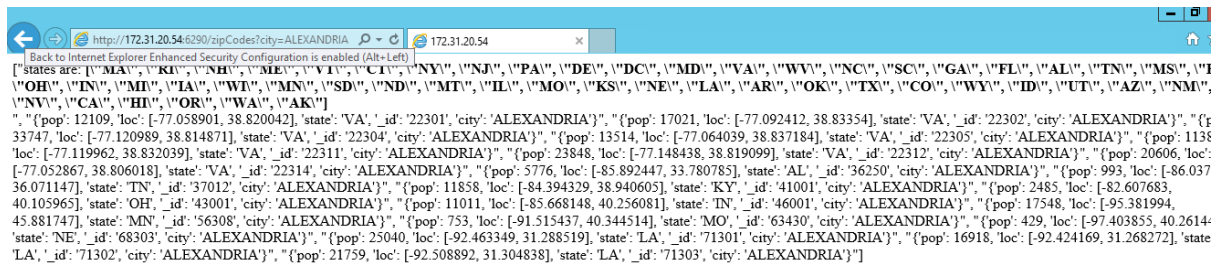

Some services running in background to support my REST call - using mongoDB

	mongo.exe	0%	10.0 MB
	mongod.exe	0%	2.2 MB
	mysqld.exe	0%	2.4 MB
	Python Launcher for Windows (...)	0%	0.6 MB
	Apache HTTP Server	0%	27.0 MB
	Apache HTTP Server	0%	0.1 MB

My REST Call output in web browser

This JSON document can be parsed in HTML5 or in anyother programming language to display as needed. I had consumed this in HTML5 but that code is not ready with me at home. I used jquery for that. Angular JS or plain javascript can also be used
